- Shopping platform
  - Every product will have its individual landing page with the following details: **Product Name, Description, Category, Price, Images**
  - The body field should show only **50 words** by default with a **Read More** button. The remaining text will be shown on click of this **Read More** button. A **Show Less** button will also collapse the content to **50 words** again
  - The **Category** will also have their **individual landing pages**, which will display all the products tagged with the specific **category** in **descending** order of their **created date.**
- Users
  - Customer
    - can view/buy products
    - will be able to add own address
  - Anonymous user - can view products only
  - Administrator - can manage site
  - Content admin - can add products
- The platform will also be able to expose the products through an API. Below is how it will work:
  - An **API** will be exposed to list all products created on the platform by default. The API will expose the following information: **Title, description, price, images**
  - The API will be public.
  - The API response should be updated whenever products are added or deleted or modified
